

# Patient Profiles

Patient Profiles are medical reports on all patients in your neighborhood. Cut them out and paste them on 3x5 cards. Arrange the cards in what you think might be a logical pattern showing how the disease has spread. As you get new information, rearrange the cards as needed.

When all information has been received, review the cases one last time, and construct a final arrangement of the cards. Make sure that you can explain the reasons for your final arrangement.

## Case 7001
